Agents that reduce sphingosine kinase activity or expression are used: (i) to reduce cell proliferation, specifically for treating cancer, and (ii) to treat diseases associated with abnormal cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents the mouse sphingosine kinase la. The coding sequence was isolated by searching a dbEST (expressed sequence tag database) using amino acid sequence results from sequenced tryptic digests of the rat sphingosine kinase. Expression of sphingosine kinase in cells results in formation of sphingosine-1-phosphate, a known second
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Anticancer; antiproliferative; antiatherosclerotic; stroke; restenosis; antineurodegeneration; sphingosine kinase; cell proliferation; apoptosi cancer; diabetic neuropathy; Alzheimer's disease; atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                messenger, and confers serum-independent growth; increases proliferation and suppresses serum-deprivation or ceramide-induced apoptosis. The sphingosine kinase nucleic acid is used: (a) to increase sphingosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New sphingosine kinase, used to treat diseases involving abnormal cell proliferation, e.g. cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        26-MAY-1998;

                               useful for decreasing cell proliferation, e.g. for treating cancer, and for treating diseases associated with abnormal migration and motility of cells, e.g. restenosis or diabetic neuropathy. Agents that increase activity are used to reduce cell death. Antibodies raised against SPHK, and primers or oligonucleotides derived from the DNA are useful for diagnosis. The antibodies are also useful as therapeutic inhibitors. The present sequence represents a murine sphingosine kinase la (mSPHKla) corresponding to residues 124 to 504 of SPHKla in GenBank Accession no. AAC61697.
                                                                                                                                                                                                 The invention relates to an isolated sphingosine kinase (SPHK) DNA (transformed with SPHK DNA are used to screen for agents that reduce, eliminate or promote SPHK activity. Agents that inhibit activity are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the mouse sphingosine kinase la. The coding CC sequence was isolated by searching a dbEST (expressed sequence tag CC database) using amino acid sequence results from sequenced tryptic CC digests of the rat sphingosine kinase. Expression of sphingosine kinase CC in cells results in formation of sphingosine-1-phosphate, a known second CC messenger, and confers serum-independent growth; increases proliferation, CC and suppresses serum-deprivation or ceramide-induced apoptosis. The sphingosine kinase nucleic acid is used: (a) to increase sphingosine kinase content of cells, specifically for reducing cell death and/or increasing cell proliferation; and (b) to produce transfected cells that CC increasing cell proliferation; and (b) to produce transfected cells that CC are used to screen for agents that inhibit or promote sphingosine kinase activity. Agents that reduce sphingosine kinase activity or expression CC are used to it to treat diseases associated with abnormal cell migration or motility, particularly cancer, restenosis or diabetic conditions associated with reduced cell proliferation, e.g. developmental CC retardation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

Cells transformed with SPHK DNA are used to screen for agents that reduce, eliminate or promote SPHK activity. Agents that inhibit activity are useful for decreasing cell proliferation, e.g. for treating cancer, and for treating diseases associated with abnormal migration and motility of cells, e.g. restenosis or diabetic neuropathy. Agents that increase activity are used to reduce cell death. Antibodies raised against SPHK, and primers or oligonucleotides derived from the DNA are useful for diagnosis. The antibodies are also useful as therapeutic inhibitors. The present sequence represents a murine sphingosine kinase 1b (mSPHK1b) corresponding to residues 1 to 388 of SPHK1b in GenBank Accession
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated sphingosine kinase, useful in identifying modulators for treating e.g. cancer, also related nucleic acid, vectors and transformed cells

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 associated disorder especially cancers such as leukaemia, lymphoma, ovarian, breast, lung, colon, testicular, stomach and skin, ovarian, breast, restenosis or ischaemia and cell proliferative disease or disorder associated with vascular diseases. SphK gene is used in gene therapy and antisense-therapy. Sphingolipids serving as signalling molecules, have recently emerged as regulators of cell growth, differentiation, diverse cell phenotypes and cell death. Activation of SphK by tumour necrosis factor (TNF)-alpha inhibits apoptosis in human endothelial cells. The present sequence is consensus mouse sphingosine kinase (SphK) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to sphingosine kinase (SphK) polypeptides and nucleic acids encoding them. SphK is useful for treating a SphK-associated disorder especially cancers such as leukaemia, lymphoma, ovarian, breast, lung, colon, testicular, stomach and skin, atheroscierosis, restenosis or ischaemia and cell proliferative disease or disorder associated with vascular diseases. SphK gene is used in gene therapy and antisense-therapy. Sphingolipids serving as signalling molecules, have recently emerged as regulators of cell growth, differentiation, diverse cell phenotypes and cell death. Activation of SphK by tumour necrosis factor (TWF)-alpha inhibits apoptosis in human endothelial cells. The present sequence is human sphingosine kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; Page 90-91; 107pp; English.

```

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABL89940-ABL90844) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, altergies, autoimune chaemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's clisease, multiple sclerosis, rheumatoid arthritis and ucerative disease, multiple sclerosis, rheumatoid arthritis and ucerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epileps; and (f) infectious diseases such as viral, bacterial, fungal and parastic infections.

Claim 11; SEQ ID NO 2585; 2081pp + Sequence Listing; English.

disorders

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format direfrom WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated sphingosine kinase (SPHK) DNA. Cells transformed with SPHK DNA are used to screen for agents that reduce, eliminate or promote SPHK activity. Agents that inhibit activity are useful for decreasing cell proliferation, e.g. for treating cancer, and for treating diseases associated with abnormal migration and motility of cells, e.g. restenosis or diabetic neuropathy. Agents that increase activity are used to reduce cell death. Antibodies raised against SPHK, and primers or oligonucleotides derived from the DNA are useful for diagnosis. The antibodies are also useful as therapeutic inhibitors. The present sequence represents a human sphingosine kinase 1 (hSPHKI).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Fig 3; 24pp; English

The polypeptides can be obtained using recombinant DNA methods, and host cells containing expression vectors including SK polypucleotides are used in a claimed method of screening for compounds that inhibit or activate human SK activity. Human SK specific antibodies, inhibitors, ligands or their analogues can be used as bioactive agents to treat inflammation or disease including viral, bacterial or fungal infections, allergic responses, mechanical injury associated with trauma, hereditary diseases, lymphoma or carcinoma, and other conditions with activate the genes of kidney, lung, heart, lymphoid or tissues of the nervous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        an enzyme that phosphorylates sphingosine to form sphingosine 1-phosphate. The sequence was deduced from that of a polynucleotide (see AAA50508) isolated from an HeLa cDNA library. The invention provides polynucleotides (see AAA50508-10) and polypeptides (see AAY96057-59) for the human sphingosine kinase (SK) homologues SKA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New human sphingosine kinase A, B and C polynucleotides and polypeptides useful in e.g. chromosome and gene mapping, and detecting inflammation or disease associated with abnormal levels of sphingosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        02-MAR-2000; 2000WO-CA00223
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is that of human sphingosine kinase A (SKA),

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and
                                                                                                                                                                                                                                                                                                                                                                                                      Tang

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is human sphingosine kinase type 1 (hsk1). The sk1 gene is located on chromosome 17q25.2. The sk1 converts the substrate sphingosine to sphingosine-1-phosphate (SIP). The sk1 gene and encoded polypeptide are applicable in screening drug candidates particularly inhibitors for preventing or treating disorders such as haemostasis, thrombosis, allergic reactions, proliferative diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Thelper-1 related disease; chronic obstructive pulmonary disease; asthma; myocardial infarction; neurodegenerative disorder; wound healing; embryogenesis; anticoaggulant; cerebroprotective; neuroprotective; antipsoriatic; antiarthritic; cytostatic; cardiant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sclerosis, T helper-1 related diseases, chronic obstructive pulmonary disease, asthma, myocardial infarction, neurodegenerative disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New human sphingosine kinase type I gene for screening drug particularly inhibitors used for preventing or treating e.g atherosclerosis, thrombosis, asthma and diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              28-OCT-1999; 99US-0162307.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC comprises: (a) an oligo-df primer and an oligonucleotide complementary to to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC complementary strand of a polynucleotide which comprises a 5'-end CC complementary strand of a polynucleotide which comprises a 5'-end CC complementary strand of a polynucleotide which comprises a 5'-end CC complementary to the cCC polynucleotide comprises a 3'-end sequence, where the CC oligonucleotide comprises a 3'-end sequence, where the CC oligonucleotide comprises a 3'-end sequence, where the CC oligonucleotide comprises a 3'-end sequence which comprises a 15' nucleotides and the combination of CC the 5'-end sequence/3'-end sequence is selected from those defined in CC the specification. The primer sets can be used in antisense therapy and CC particularly full-length cDNAs. The primers are useful for synthesising polynucleotides, CC particularly full-length cDNAs. The primers are also useful for the combination of CC cDNAs seasily without any specialised methods. ANHO3166 to ANH13628 and CC ANH13633 to ANH18742 represent human cDNA sequences; and ANH03164 to ANH13628 and CC ANH3633 to ANH18742 represent human amino acid sequences; and ANH1369 to ANH13622 co of the present invention.
                                                                                                                                                                                                                                                                                                                                                                               οy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              19
```

```
C: SUBUNIT: Interacts strongly with caspase 2, weakly with caspase 9
c and with APAP1 in a cytochrome c-inducible way leading to the
c formation of an apoptosome. This interaction may be ATP-dependent.
C: SUBCELLULAR LOCATION: Cytoplasmic.
C: ALTERNATIVE PRODUCTS: 4 isoforms; I/NAC beta/DEFCAP-L (shown here), 2/NAC alpha/DEFCAP-S, 3/NAC gamma and 4/NAC delta; are
c produced by alternative splicing.
C: TISSUE SPECIFICITY: Widely expressed. Isoforms 1 and 2 are
expressed in peripheral blood leukocytes, chronic myelogenous
c leukemia cell line K-562, followed by thymus, spleen and heart.
C also detected in lung, placenta, small intestine, colon, kidney,
C ilver and muscie.
C: SIMILARITY: CONTAINS 1 NACHT DOMAIN.
C: SIMILARITY: CONTAINS 1 CARD DOMAIN.
C: SIMILARITY: CONTAINS 7 LEDCINE-RICH REPEATS (LRR).

Submitted (JUL-2001) to the EMBL/GenBank/DDBJ databases.
I- CATALYTIC ACTIVITY: 3-phosphoglycerate + NAD(+) = 3-phosphohydroxypyruvate + NADH.
I- Phosphohydroxypyruvate + NADH.
I- PATHMAY: Serine blosynthesis; first step.
I- SUBUNIT: Homotetramer (By similarity).
I- DISEASE: Defects in PHGDH are the cause of a deficiency.
I- DISEASE: Defects in PHGDH are the cause of a deficiency.

```

Pred. No.

is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
